# Industrial spark plugs

## Overview

Gas-powered Co-Gen power plants and stationary power generators provide economically generated heat and electricity right at the place where they are needed the most. This can, for instance, be at schools, swimming pools, hotels, hospitals or production facilities. Featuring high quality, Bosch industrial spark plugs to ensure reliable operation of gas engines.

### System and component developer

Thanks to its close cooperation with engine manufacturers, Bosch has gained outstanding know-how – concerning components such as spark plugs as well as the sophisticated interventions inside the engines. Thanks to this expertise, Bosch is able to provide a comprehensive aftermarket range of spark plugs suiting almost any engine – including older units.

### Technological competence

The aftermarket also benefits from motorsport and original-equipment innovations. Innovative trends and technologies are implemented with the production of spark plugs for stationary gas engines.

### High quality

Following the first Bosch spark plug launched in 1902, several other patents have also been filed. These include, for instance, the continuous-wave (CW) laser-welding method which significantly increases the durability of the welded connection on the center electrode. Innovative alloys such as nickel, yttrium and precious-metal that help ensure a long service life. Production procedures such as the heat-shrink assembly, nickel-coated spark-plug housings and threads ensure a high reliability and longer service life.

### Service solutions

Bosch developed a professional tool to readjust the electrode of iridium industrial spark plugs. It allows extending the spark-plug service life and reducing the servicing downtime and costs.

## Technology

### Why to use Bosch seal rings

#### Seal rings significantly contribute to safety

The seal rings used by Bosch feature minimal dimensional deformation, but they are highly elastic, thus preventing the spark plug from loosening during operation.

**In case a spark plug is removed and reinstalled, the seal ring is to be replaced. For this purpose, Bosch recommends using only Bosch seal rings.**

## M18 industrial spark plugs

Product range & details

	7305	7306	7308
Type	MR 3 DII 360	MR 3 DPP 330	MR 3 DII 360
Type number	0 242 356 512	0 242 356 504	0 242 356 515
Wrench size	22.2 mm (7/8")	22.2 mm (7/8")	20.8 mm (13/16")
Thread	M 18 x 1.5 mm	M 18 x 1.5 mm	M 18 x 1.5 mm
Thread length	20.6 mm (13/16")	20.6 mm (13/16")	20.6 mm (13/16")
Precious-metal center electrode	Iridium	Platinum / Iridium	Iridium
Precious-metal ground electrode	Iridium	Platinum	Iridium
Electrode gap	0.3 mm (0.011")	0.3 mm (0.011")	0.3 mm (0.011")
Resistance	6 kΩ	3 kΩ	6 kΩ
Adjustable electrode gap	Yes	No	Yes

### Advantages at a glance

- ▶ First-class ignitability for high performance due to specifically developed precious-metal alloys at the center and ground electrode
- ▶ Outstanding engine protection due to nickel-plated housing and thread
- ▶ Hassle-free spark plug replacement due to factory-set electrode gap
- ▶ High wear resistance due to a highly heat-conductive center electrode
- ▶ Reliable thermal characteristics due to heat-shrink assembly

## M14 industrial spark plugs

Product range & details

### Workshop tip

## Reduced fitting times thanks to proper installation techniques

### Replace the whole set at once

The operating conditions of an engine's individual spark plugs are very similar – as it becomes apparent by their similar wear behavior.

Experience has shown that replacing the whole set of spark plugs is cheaper than having to replace them one by one.

### Fast and correct fitting

1. Select the matching industrial spark plug from the range of products.
2. Screw in the industrial spark plug by hand until it is seated tight at the cylinder head.
3. Then, use a torque wrench to tighten the industrial spark plug applying the torque specified.

**Thread:** M14 **Torque:** 20 – 40 Nm  
**Thread:** M18 **Torque:** 50 – 70 Nm

### Workshop-oriented packaging

## Practical for workshops and retailers

Bosch industrial spark plugs are available as a **single plug** or in **packs of ten**.

# Re-gapping tool

## Product details

The **Bosch re-gapping tool** is a professional tool for accurate readjustment of the electrode gap of Bosch M18 Iridium industrial spark plugs.

### Advantages at a glance:

- ▶ **Increase in service life of industrial spark plugs** due to accurate readjustment of the original electrode gap
- ▶ **Reduced service times and costs** thanks to its easy operation
- ▶ **Safe application thanks to integrated force limitation:** Prevents overbending of the ground electrode or pushing out the center electrode

# Re-gapping tool

## Application

During their operation, industrial spark plugs wear off as the electrode gap increases. This results in misfires. Bosch Iridium M18 industrial spark plugs were developed in such a manner as to allow electrode regapping by means of the Bosch re-gapping tool.

### Simply readjust industrial spark plugs using the Bosch re-gapping tool:

- 1. Place the cleaned M18 industrial spark plug into the socket.** Make sure, the spark plug housing is properly positioned at the pattern inlay while the back of the ground electrode faces out.
- 2. Push the lever all the way to the stop** and keep up the pressure for a period of time.
- 3. Release the pressure from the lever** and carefully remove the regapped spark plug from the socket.

### **i** Check spark plugs!

**Spark plugs are wearing parts. Their functionality should be checked regularly.**

**The following failures might point at a defective spark plug:**

- ▶ Loud combustion noises before reaching the operating temperature
- ▶ Unevenly running warm engine
- ▶ Loss of power
- ▶ High spark-plug resistance
- ▶ Need for increased ignition voltage
- ▶ Increased fuel consumption

### **i** Right tool for the job!

**Readjusting the electrode gap without proper tools bears some risks:**

There are risks of bending the ground electrode too much or to break it off. The electrode can also be set incorrectly or the spark plug can be damaged. Bosch thus developed the re-gapping tool adopting the electrode gapping method used at the production and transferring it to a handy service tool.

# Driven by efficiency

Bosch technologies are used worldwide in almost all vehicles and in a broad range of industrial applications. People, and assuring their mobility, is what we are focused on.

Therefore, we have dedicated the last 125 years of pioneering spirit and expertise in research and manufacturing to achieving this.

We continue to work on our unique combination of solutions for spare parts, diagnostic devices, workshop equipment and services:

- ▶ Solutions for efficient vehicle repairs
- ▶ Solutions for industrial applications
- ▶ Innovative workshop equipment and software
- ▶ The world's most comprehensive range of new and replacement parts
- ▶ Large network of wholesale customers, for quick and reliable parts supply
- ▶ Competent hotline support
- ▶ Comprehensive educational and training offers
- ▶ Targeted sales and marketing support
